

ʔaʔa-FaM

A Reference Grammar of the Narish Language

Bethany E. Toma, Knut F. K. Ulstrup

30. May 2020

Foreword

ʔaʔa-FAM is a constructed language spoken on the fictitious Nareland island.

Part I

Grammar

Chapter 1

Phonology

1.1 Consonants

	Labial	Alveolar	Palatal	Velar	Uvular	Glottal
Fortis	$p^h \sim \widehat{p\phi}$	$t^h \sim \widehat{ts}$	$c \sim \widehat{c\zeta}$	$k \sim \widehat{kx}$	$q \sim \widehat{q\chi}$	$ʔ$
Lenis	$p \sim b$	$t \sim d$				
Fricative	f	s	$\zeta \sim x \sim \chi \sim \text{h} \sim \text{h}$			
Approximant		l	j	w		
Nasal	m	n				
Rhotic		$r \sim \text{ɹ} \sim \text{ɻ}$				

Table 1.1: Phonemic Consonant Inventory

1.2 Vowels

	Front	Central	Back
Close	$i \text{ (i:)}$		$u \text{ (u:)}$
Mid		ə	
Open		$a \text{ (a:)}$	

Table 1.2: Phonemic Vowel Inventory

1.3 Phonotactics & Allophony

Syllables always contain a vowel nucleus, with rarely more than two onset consonants and two coda consonants. Sonority hierarchy plays a big role in the structure of syllables and their realization.

1.3.1 Sonority Hierarchy

1.3.2 High vowel lowering

The high vowels /i u/ are lowered to [e o] before /j w/ respectively.

$i(:) \rightarrow e(:) / _j$
 $u(:) \rightarrow o(:) / _w$

1.3.3 Epenthetic schwa

The epenthetic schwa appears within consonant sequences that, without adjacent vowels, violate syllable structure and may not be realized. It occurs in the earliest non-initial position possible that provides legal

consonant sequences. This schwa is never stressed. For example, the word *NurRKi* is phonemically /'nurrk^hi/, but *ʔaʔa-FaM* does not allow duplicate continuant phonemes, leaving the second /r/ out of the first syllable. The following syllable would not be able to accommodate it either, as it would violate the sonority rules by placing a less sonorous phoneme between two more sonorous ones. Of the two positions for the epenthetic schwa within this sequence, [ˈnurək^hi] and [ˈnurrək^hi], only the former solution accommodates both restrictions and yields a legal realization.

<i>Example</i>	<i>Phonemic transcription</i>	<i>Phonetic Realization</i>
NurRKi	/ˈnurrk ^h i/	[ˈnurək ^h i]
mBiT	/ˈmpit ^h /	[məˈbit ^h]
inNiM	/inˈnim/	[inəˈnim]
SaFR	/ˈsafr/	[ˈsafər]

Word-onset sequences may never be disambiguated by prefixing an epenthetic schwa to the word. Like in medial and coda sequences, the epenthetic schwa must occur interconsonantly, but not across word boundaries. In the sequence $|\dots C_a \# C_x C_y V \dots|$, where C_a is a consonant in the preceding word and $C_x C_y$ is an illegal sequence, the epenthetic schwa may not attempt to separate C_a and C_x in any way, and must instead separate C_x and C_y . Word boundaries are inherently segmenting and preclude other segmenting elements like the epenthetic schwa. However, compound words are considered to be one phonological word, and in lacking a word boundary must make use of the epenthetic schwa.

1.4 Prosody

Stress, in the form of elevated pitch and volume, is placed on the first non-schwa vowel of the word, after the first root radical, on a long vowel immediately preceding the first radical, or on certain morphemes that carry stress.

nemiwi	[nəˈmiwi]	first non-schwa vowel of word
parse	[ˈparsə]	first non-schwa vowel of word
iFaam	[iˈfa:m]	vowel after first radical
Fanas	[ˈfanas]	vowel after first radical
aaNiW	[ˈa:niw]	long vowel preceding radical
iLaasak	[iˌlaˈsak]	presence of stress-carrying morpheme (imperative affix -ak)

1.5 Morphophonemics

1.6 Orthography

ʔaʔa-FaM has two recognized orthographic conventions, both based on the Latin alphabet. Both conventions use marked letterforms to indicate which part of a word are part of the underlying root and which are grammatical markers. The precise manner in which they're marked is the major point of difference between the two orthographic styles.

By and large, both orthographic conventions attempt to use the most intuitive representation of a given phoneme. There are very few differences between the conventions. Fortis and lenis stops are written using the typical voiceless and voiced symbols, respectively, in both systems. The labial fricative is written as ⟨f⟩ and the dorsal fricative as ⟨h⟩. The rhotic is, of course, written as ⟨r⟩. The palatal approximant is written as ⟨j⟩, except when adjacent to an ⟨i⟩ within the same word, in which case it is written as ⟨y⟩. The other phonemes are written with their usual IPA characters in both conventions, except for /ʔ/, which is dealt with differently depending on which convention one is using.

1.6.1 Formal writing style

The formal writing conventions make use of small-caps letterforms to highlight roots. In addition, it uses the glottal stop character to indicate the glottal stop phoneme, using the capital glottal stop character ⟨ʔ⟩ when

the glottal stop is part of a root radical (for instance, in the word *ʔaʔa*) and the lowercase glottal stop character ⟨ʔ⟩ otherwise (such as in the suffix *-(e)ʔ*).

1.6.2 Informal writing style

The informal writing conventions, also known as “texting script”, is the orthography used in the majority of day-to-day communication. Rather than using small-caps letterforms, it uses true capital letters for roots. It also uses ⟨ʔ⟩ for the glottal stop, with no difference between capital and lowercase. While these differences could be considered less aesthetically pleasing, they result in an ASCII-compatible script, which makes this writing style far easier to use in most messaging apps and computer interfaces. Texting-style *ʔaʔa-FaM* also allows for several shorthand abbreviations that tend not to be used in more formal style.

Chapter 2

Morphology

2.1 Underlying roots

The majority of lexical items are produced by applying morphological operation belonging to their respective morphological categories to abstract roots. These roots take the form of two *radicals*, where each radical constitutes a non-zero number of consonants.

There are several fossilized derivations within the roots whose meanings have been lost, and as such form discrete roots altogether. Compare L-S ‘*travel by foot*’ and PL-S ‘*travel, habitation*’, or N-W ‘*death, murder*’ and N-WK ‘*sacrifice, martyrdom*’.

2.2 Derivational morphology

ʔaʔa-FaM allows for words to be altered syntactically and semantically using a rich set of morphological operations, divided into two categories based on their concatenation.

2.2.1 Primary derivation

Primary derivation refers to the non-concatenative morphology of stems. These operations are for the most part not productive, and not all roots have a corresponding stem with each of these patterns. They may not stack, i.e. a stem may only be inflected by one pattern at a time.

2.2.2 Secondary derivation

Secondary derivation refers to the exclusively suffixing operations that may be applied to stems in addition to primary derivation. Unlike primary derivation, these suffixes may be stacked freely.

2.2.2.1 -uru - ‘to be’

Rather than using a verbal copula, nominal and adjectival phrases are derived into verbs with the meaning ‘to be X’ or ‘to have characteristic X’ with the -uru affix.

- (1) ha KNUT inFiSuru.
Knut is a baby.

Adjectives and determiners may still modify a noun that has been turned modified into part of the verb, resulting in these words serving a semi-adverbial function in these cases.

- (2) ha KNUT li BaCa inFiSuruli?
ha KNUT li BaCa inFiS-uru -li
REF.M Knut which small baby-COP-INT
‘Which little baby is Knut?’

Most ʔaʔa-FaM speakers reduce -*auru* and -*iuru* to -*aaru* and -*iiru*, respectively. In western dialects, however, they are instead most often pronounced as -*ore* [orə] and -*üre* [ʊrə]. Western dialects also reduce -*uru* to -*ure* [ʊrə] as well.

	<i>Pattern</i>	<i>Meaning</i>	<i>Example</i>	
1.	ΘaΘ	Abstract noun	JaB	good fortune (cf. <i>JaBa</i> ‘good, fortunate’)
2.	ΘiiΘ	Transitive verb	FiiS	to give birth to (cf. <i>Fanas</i> ‘person’)
3.	ΘiyaΘ	Unaccusative verb	KiyaL	to be poured out (cf. <i>KarLi</i> ‘water’)
4.	iΘaaΘ	Unergative verb	iNaAM	to eat (cf. <i>Niim</i> ‘to eat (smth.)’)
5.	Θ ₁ iΘ ₁ iyaΘ ₂	Causative of unaccusative	KiKiyaL	to pour (smth.) out (cf. <i>KiyaL</i> ‘to flow out’)
6.	aaΘiΘ	Causative of unergative	aaNiM	to feed (cf. <i>iNaAM</i> ‘to eat’)
7.	ΘaΘa	Attributive	SaFRa	hot (cf. <i>SaFR</i> ‘heat’)
8.	ΘanaΘ	Person of X	KanaJ	author (cf. <i>KiiY</i> ‘to write (smth.)’)
9.	ΘurΘi	Object	NurMi	food (cf. <i>iNaAM</i> ‘to eat’)
10.	ΘarΘi	Liquid noun	QarFi	coffee (cf. <i>iQaaF</i> ‘to drink coffee’)
11.	iΘuΘa	Place of X	iHuTa	night (cf. <i>HaTa</i> ‘dark’)
12.	mΘiΘ	Tool/instrument	mRiQ	weapon (cf. <i>RaQ</i> ‘pain’)
13.	inΘiΘ	Diminutive	inFiM	word (cf. <i>FaM</i> ‘language’)
14.	ΘuliΘ	Body part	BulIT	head (cf. <i>iBaaT</i> ‘to understand’)
15.	ΘuΘu	Animal	CuMPu	kangaroo (cf. <i>iCaAMP</i> ‘to jump’)
16.	ΘasiΘ	Long, slender object	NasiRK	icicle (cf. <i>NuRKi</i> ‘snowball’)
17.	ΘajuΘa	Flat object or surface	DajuLa	mirror (cf. <i>Diil</i> ‘to stare at’)
18.	ΘidiΘ	Loose, granular mass	widiW	sugar (cf. <i>WaWa</i> ‘sweet’)
19.	aΘiΘu	Closed/natural container	aBiRDu	bird’s nest (cf. <i>BURDu</i> ‘bird’)
20.	ΘimiΘu	Open/unnatural container	QimiFu	coffee mug (cf. <i>aQiFu</i> ‘coffee pot’)
21.	ΘuΘi	Color	KuWi	green (cf., <i>KajuWa</i> ‘leaf’)
22.	uΘiΘi	Experiential	uNiMi	hungry (cf. <i>NaMa</i> ‘satisfying’)
23.	ΘuuΘ	People group, land of X people	NuURK	Nords, Norse, Norway (cf. <i>NaRKa</i> ‘cold’)
24.	ΘaΘia	Nationstate	FRaNCia	France (cf. <i>FRUUNC</i> ‘Franks’)

Table 2.1: Primary derivation patterns

2.2.2.2 *-ila* - ‘there is’, ‘to have’2.2.2.3 *-ara* - wishes and greetings2.2.2.4 *-iri* - ‘to make’2.2.2.5 *-ana* - person2.2.2.6 *-ini* - diminutive2.2.2.7 *-ari* - ‘to become’, ‘to cause to be’2.2.2.8 *-inala* - ‘to make X-er, to increase’2.2.2.9 *-lat* - ‘measured in’, ‘comprising’

When describing a quantity of something, often one may desire to use a particular noun as a measure of another. While many languages (English included) turn the measured substance into an adpositional phrase modifying the measure word as the head, in ʔaʔa-FAM one turns the measure word into an adjective modifying the substance being measured using the suffix *-lat*. For instance, *KimiLu* ‘glass’ becomes *KimiLulat* ‘a glass of’ in *KimiLulat MarHi* ‘glass of milk’

This suffix is not used with numerals whose purpose is to convey cardinal numbers, however, which can be prepended onto noun phrases like determiners without being adjectivalized.

- (3) *pars bar aKiLulat KarLi Kiil.*

pars bar aKiLu -lat KarLi Kiil
 3.MED three bottle-MEAS water drink
 ‘He drank three bottles of water.’

Numerals modified by *-lat* convey “X at a time” or “in groups of X”.

- (4) *miwi naswi sarlat Fiimeʔ dak.*

miwi naswi sar -lat Fiimeʔ dak
 2.PL 1.EX one-MEAS want
 ‘We’d like to speak with you one at a time.’

- (5) *paslat iDaamAk!*

pas -lat iDaamAk
 two-MEAS gather:IMP
 ‘team up in pairs!’

2.2.2.10 *-aki* - ‘made/comprised of’

When one thing is constructed from/comprised of a particular material, one can indicate this by taking the noun of the material in question and turning it into an adjective using the suffix *-aki*—for instance, *RurKDi* ‘wood’ becomes *RurKDiaki* ‘wooden’.

- (6) *nas Majuwaaki iFuSairi*

nas Majuwa -aki iFuSa -iri
 1SG playing_card-made_of house-make
 ‘I’m building a house of cards.’

-aki is also used for things that come out of or are produced by a living thing. This contrasts with *wan*, which relates more to ownership or association. Thus, if Magnus purchases a chicken egg from the grocery store, the egg is *MAGNUS wan HuNuaki Fursi*. This is also used to describe who birthed a human person, and thus is the source of *-aki*’s use as a matronymic suffix—if Magnus’s mother is named Lisa, he is *LISAAKI MAGNUS*. Note that this does not extend to fatherhood, since a child does not come out of their father in the same way as their mother. An equivalent patronymic (less common in Narish culture) would thus have to use *wan*.

2.2.2.11 *-s(e)* - ‘the ... one’

Used to nominalize adjectives in contexts where the head is known or obvious.

- (7) A: mi li MasiH Niimeʔ kajli? (*‘Which ice cream bar do you want to eat?’*)
 B: CaKLas nas kaj!
 CaKLa -s nas kaj
 chocolate-NMZ 1SG want
‘I want the chocolate one!’

Unlike equivalent periphrastic constructions from other languages (such as English’s ‘the chocolate one’), this derivation can only be applied to bare adjectives, and thus cannot be applied to relative clauses or strings of adjectives.

2.2.3 Compounding

2.2.4 Gender

Certain lexical items may be inflected to convey the gender of its referent. On certain words, namely *-ara* greetings, gender marking is obligatory.

- un Feminine gender
- aj Masculine gender
- uj Explicitly non-binary
- an Gender-neutral, agender

2.3 Inflectional morphology

2.3.1 Verb finals

Verbs that are either not declarative, or not the head of the matrix clause, must be marked based on their purpose in the sentence. These verbs may appear in subordinate clauses, as converbs, serial verbs, or finite non-declarative head verbs.

- Ø Declarative verb
- (e)ʔ Connective
- li Interrogative
- ak Imperative
- tu Relative
- uc Subordinate

Declarative verbs are unmarked, finite, and modally neutral.

Connective verbs may be either finite or non-finite. They work in conjunction with the head verb to describe concurrent or subsequent actions, or to modify the meaning of the verb clause with auxiliary verbs.

- (8) a. naswi KajuLa tui Fiil -ami -ʔ dak
 1EX water_surface on_surface_of notice-REFL-CVB can
‘We could see ourselves in the water surface.’
- b. nas bu NuWu RiIQ -eʔ LaW daw iCaan
 1S that possum hit CON up towards climb
‘I’m climbing up to hit that possum.’

2.3.2 Evidential modality

ʔaʔa-FaM has a four-way distinction within its evidentials that distinguishes direct witness with reportative, inferential, and internal/assumed speech. These affixes typically appear on the head verb, but may also be used on even non-finite verbs.

	Function	Example	Translation
Ø-	Direct Witness	iNaam	<i>‘they’re eating’</i>
ir-	Reportative	iriNaam	<i>‘they’re eating, they said’</i>
hwa-	Inferential	hwaiNaam	<i>‘they’re eating, judging by the smell’</i>
qaa-	Internal/Assumed	qaaiNaam	<i>‘they’re probably eating, it’s around dinner time’</i>

Table 2.2: Evidential modality affixes

- (9) FanaSaj irMaLaurutu iNaameʔ jaa.
FanaSaj ir- MaLaurutu iNaameʔ jaa
 man REP-ill:COP:REL eat:CON indeed
‘The man, who I was told was sick, was eating after all.’

In the above example, the evidential attaches to and scopes over only the relative clause *‘FanaSaj MaLaurutu’*, leaving the matrix clause unmodified.

2.3.2.1 ir- Reportative speech

Information that has been obtained through the retelling by a secondary party is marked with *ir-*. The speaker may not have been present to witness the event themselves, and are relying completely on hearsay.

- (10) bu YaT was barariʔ ir- Riit
 DEM.DIST shot DEM.PROX:NMZ three:become:CVB HSY-end
‘He’s done that trip three times.’ (speaker heard from someone else)

2.3.2.2 hwa- Inferential speech

If the speaker hasn’t observed an event themselves and is interpolating from current circumstances, they may use *hwa-* to mark this.

- (11) MuHu wa PLas fit hwa- NiiW
 cow DEM.PROX place at INFER-died
‘The cow was seemingly killed here.’ (speaker noticed signs of struggle)

2.3.2.3 qaa- Internal/Assumed speech

Verbs can also be marked for whether the speaker has no concrete evidence or report of the event, but may still assume that said event happened because of a gut instinct, tendencies, routines, or assumptions about the world.

- (12) inFis qaa- isaaʔ
 children INTER-sleep
‘The children are probably asleep by now.’ (uttered late at night)

2.4 Pronouns and determiners

	<i>Nonplural</i>	<i>Plural</i>
<i>Speaker-only</i>	nas	naswi
<i>Addressee-only</i>	mi	miwi
<i>Inclusive</i>	nemi	nemiwi

Table 2.3: Discourse participant pronouns

	<i>Determiner</i>	<i>Pronoun</i>
<i>Proximal</i>	wa	wase
<i>Medial</i>	par	parse
<i>Distal</i>	bu	buse
<i>Interrogative</i>	li	lise
<i>Relative</i>	kun	kunse

Table 2.4: Determiners and demonstrative pronouns

Chapter 3

Syntax

3.1 Verb stacking

Verb phrases can contain several verbs, describing concurrent, subsequent, purposive, or consequential actions or states.

3.2 Auxiliary verbs

The auxiliary verbs are a set of semantically sparse verbs that convey aspectual and modal information. These verbs are either the head verb or a connective (dependent) verb, but always semantically scope over the entire VP.

3.2.1 *hwii* - negative

As the head verb, *hwii* scopes over the whole VP, negating all of its subordinate verbs. As a connective verb, it scopes leftward, negating any other connective verbs that precede it.

3.2.2 *usnak* - hortative

from WeSiiN → *usin* + *-ak* → *usnak*

encodes a sort of imperative function so doesn't really take *-ak* suffix

3.2.2.1 Exhortative

let's do X, c'mon

3.2.2.2 Subjunctive?

in subordinate clauses, smth like "would do X"?

3.2.2.3

3.3 Subordinate clauses

Full verb phrases may be nominalized and act as an argument of another predicate.

3.3.1 Relative clauses

Relative clauses are a type of subordinate clauses that describes a referent's states or actions. They are internally headed, always verb-final, and the relative determiner *kun* is used to mark the head of the clause, i.e. the thing that is being described.

- (13) *Fanas iLaas-tu SaJauru*
person walk-REL sleepy:COP

'The person who walked home was sleepy.'

Clauses with a single argument do not require that the head is marked, as the argument is assumed to be the head by default. Still, the verb itself can be marked to describe the realization or performance of the action.

- (14) *inFiM kun imaaW-tu naswi Diil*
 children REL play -REL 1P.EX look
'We watched the playtime that the children were having'

In high-valency clauses, *kun* becomes more pertinent. The most agentive argument (subject) is considered to be the head of the phrase, but may still be marked for emphasis.

- (15) a. *(kun) Fanas iFuSa daw fit iLaastu nas Fiil*
 REL person house to in walk:REL 1S see
'I saw the person who walked into the house.'
- b. *Fanas kun iFuSa daw fit iLaastu nas Fiil*
 person REL house to in walk:REL 1S see
'I saw the house that the person walked into.'
- c. *Fanas iFuSa daw fit kun iLaastu nas Fiil*
 person house to in REL walk:REL 1S see
'I saw how the person walked into the house.'

An alternative to using a determiner is simply to topicalize a given constituent. Only noun phrases may be relativized through topicalization; the relative verb may not be periphrastically topicalized (i.e. left-dislocated), as this introduces major syntactical ambiguities.

Due to the syntactic constraints of certain secondary derivations, they cannot inflect relative NPs directly.

- (16) **CuSu iFaAMtu-uru*
CuSu iFaAMtu kuns -uru
 cat jump:REL REL.PN-COP
'it's a talking cat.'

3.4 Comparative constructions

from-comparative, marks standard (to which is compared)

- (17) a. *pUMu Fanas fun MaNTa-uru*
 rabbit person from big -COP
'The rabbit was bigger than a person.'
- b. *TaN nemi buse fun JaL -ila*
 TOP QUAL STD MRK
 time DU.IN DIST:PN from many_things-have
'We have more time than them.'

3.5 Animacy hierarchy

3.6 Causative constructions

?a?a-fAM has several different strategies when it comes to causative constructions, depending on the nature of the predicate in question. Some of these are morphological in nature, while others more periphrastic.

3.6.1 -ari for nominal and adjectival predicates

Simple nominal and adjectival predicates are turned into causatives using the translative suffix *-ari*. If the predicate in question would be expressed with *-uru* in its non-causative form, *-ari* is likely appropriate for the causative.

- (18) a. *QarFi SaFRa-uru*
 coffee hot -COP
'The coffee is hot.'
- b. *QarFi nas SaFRa-ari*
 coffee 1SG hot -TRANSL

- 0 Natural Forces
- 1 Pronouns (1 > 2 > 3)
- 2 Speakers of ?a?a-FaM
- 3 Non-speakers of ?a?a-FaM
- 4 Higher-order animals (mammals, octopus, intelligent creatures)
- 5 Body parts, tools, any inanimate object used for acting upon something
- 6 Lower-order animals (insects, mollusks, fish, worms, etc.)
- 7 Plants
- 8 Inanimate objects
- 9 Abstract concepts

Table 3.1: Animacy hierarchy in nominals

'I heated up the coffee.'

When used with only one argument, verbs ending in *-ari* are assumed to have a null subject and the argument serving as the unaccusative object. This results in *-ari* also serving as 'to become' (the reason for its being glossed as 'translative') as well as 'to cause to be'.

- (19) *QarFi SaFRa-ari*
 coffee hot TRANSL
'The coffee got hot.'

3.6.2 Valency-increasing verb patterns

Which pattern is used to form the causative of a predicate depends largely on the nature of the intransitive form of that root. There are two different potentially valency-increasing patterns that can be used for verbs: the $\Theta_{ii}\Theta$ and the $aa\Theta_i\Theta$. The exact effect of each of these valency-increasing operations depends on the individual root; their behavior can differ.

For verbs that would be agentive ambitransitives in English, such as 'to eat', generally the behavior is rather straightforward: the $\Theta_{ii}\Theta$ form turns the verb into a straightforward transitive, and the $aa\Theta_i\Theta$ form serves as a causative of the intransitive.

- (20) a. *nas iNaam*
 1SG eat\INTR
'I was eating.'
- b. *nas KurKi Niim*
 1SG cookie eat\TR
'I ate a cookie.'
- c. *nas inMiM aaNiM*
 1SG parent_child\DIM eat\CAUS
'I fed my daughter.'

It's worth noting that object of the transitive verb cannot be included as the object of the causative verb; the causative verb can still only have two arguments.

- (21) **nas inMiM KurKi aaNiM*
 1SG parent_child\DIM cookie eat\CAUS

To express this notion, a periphrastic causative would be required.

Other types of verbal paradigms make this causative relationship less obvious and use these roots in other ways. For instance, for some roots the intransitive form is unaccusative or passive in nature. In these cases, the transitive form behaves as a causative:

- (22) a. *nas wan ManaM iNaaw*
 1SG POSS parent_child death\INTR
'My mother died.'

- b. *nas Manam NiiW*
 1SG parent_child death\TR
'I killed my mother.'

For these roots, the aaΘiΘ form means the same thing as the ΘiiΘ form, but while the ΘiiΘ form implies a successfully completed action, the same implication is not present for the causative form.

- (23) *nas Manam aaNiW*
 1SG parent_child death\CAUS
'I tried to kill my mother' (and she may or may not have died).

For many of these roots, the intransitive is identical in meaning to a 'passive' use of the transitive with an omitted subject; whether there is any noticeable difference between these depends on the verb.

- (24) *nas wan Manam NiiW*
 1SG POSS parent_child death\TR
'My mother was killed.'

Unergative verbs

3.6.3 Periphrastic causatives

In addition to the morphological causatives above and their aforementioned limitations, ʔaʔa-FAM has a periphrastic causative that can scope over a wider variety of predicates. This periphrasis is expressed through a serial construction using the verb *wesiin* 'to effect, to cause' followed by the description of the caused predicate.

- (25) *nas wesiin , qarfi mi kiil*
 1SG bring_about coffee 2SG drink
'I caused you to drink coffee.' (lit., 'I brought it about, you drank coffee.')

Insert stuff about causatives and directness here.

Chapter 4

Semantics and pragmatics

4.1 Numbers

Numerals in ʔaʔa-FaM serve several purposes.

4.1.1 Cardinal numbers

Cardinal numbers make use of bare numerals modifying nouns directly.

4.1.2 Ordinal numbers

Ordinal numbers

4.1.3 Distributive numbers

Distributive numbers express the quantity of concurrent relevant items, as the answer to "how many at a time?" or "how many per iteration?". They make use of the numerals as modified by *-lat*

4.2 Phatic expressions

Phatic expressions in ʔaʔa-FaM are all in some way related to the nouns they are derived from, suggesting an emphasis on acknowledging the addressee's current or upcoming actions. The addressee may respond with the same expression back, even if it does not apply to the original speaker in any way, or respond in kind with a more suitable expression.

The obligatory gender marking is a means of expressing your gender identity in an unintrusive manner.¹ One always uses the gender marker that approximates one's gender identity (or at least intended gender presentation at the time), even if responding to someone else's phatic expression with a different gender marker. In contexts where the gender of the speaker is unclear or intentionally left unspecified, *-an-* is used. More recently, *-uj-* has been innovated as an explicitly nonbinary variant, though its use has been pretty much exclusively limited to the LGBTQ+ community.

In informal speech, most speakers shorten *-unara* and *-ajara* to *-nar* and *-jar*, respectively. While the full forms are generally used in formal contexts, the shorter forms are more likely to occur when speaking more casually. There are no generally accepted shortened variants for *-anara*, which tends to not be used outside of formal contexts anyway, or *-ujara*, whose use is limited anyway.

In the Southernmost regions of Nareland, where contact with the Celts has always been strongest, most dialects have replaced *-ara* with the Scottish Gaelic-inspired *-maa* and *-faa* replacing *-jar* and *-nar*, respectively. In urban areas in the East, particularly the capital, Danish influence has led to many speakers using *kud X* (derived from Danish *god*) in colloquial speech. In both places, however, the full form is generally still used for formal speech. A speaker of ʔaʔa-FaM from any region is likely to use *Fasajara/Fasunara* to greet someone at a job interview. With family and friends, a speaker from Masintulwa is likely to use *kud Fas*, a speaker from SOUTHERNCITY is likely to use *Fasmaa/Fasfaa*, and speakers from most other parts of the country are likely to use *Fasjar/Fasnar*.

¹The real reason is that as Beth once ended a conversation with "sayonara", Knut noticed some coincidental similarities with the word *saj* 'sleep' and the affix *-un* to indicate feminine gender, with the *-ara* reanalyzed as a phatic/optative marker of sorts.

Examples of Common Phatic Expressions

FaSanara (from *FaS* ‘life’) is a catch-all greeting, suitable for any time of day. It’s generally only used in person.

saJanara (from *saJ* ‘sleep’) is similar in use to “goodbye” or “good night”. It is only used if the people in question intend to be separated for a period that includes a night of sleep before seeing each other again.

YaTanara (from *YaT* ‘travel not of one’s own power or volition’) is used to wish someone a pleasant trip where the person is not directly in control of their means of transportation (e.g. on public transport or as a passenger in a car). In contrast, if the person has direct control over their travel, e.g. by walking or driving a car, one would rather use **PLaSanara** (from *PLaS* ‘movement’) or **LaSanara** (from *LaS* ‘walking’).

4.3 Name determiners

In ʔaʔa-FaM, when a name is used referentially (that is, pointing out a particular entity named that), the name must be preceded by a naming particle—*ha* for male names and *fu* for female names (derived from former personal pronouns that have now been replaced by demonstratives in other contexts). More recently, *na* has been innovated as a gender-neutral alternative (this new *na* being unrelated to the former first-person determiner).

These determiners are only required when the name in question is serving a referential function, so they are not necessary when referring to the name itself as a concept (such as in ‘My name is ...’ constructions) or in direct address.

- (26) a. ha KARL-la fu JANNE iLaaF
 ‘Karl & Janne are in love.’
 b. pars KARL baj iMaaH
 ‘His name is Karl.’
 c. KARL, iWaaBak!
 ‘Karl, come back!’

4.4 Idiomatic expressions

CuMPu CuMPuuru = no shit, preaching to the choir

Part II

Dictionary

Roots and Derived Words

ʔ

ʔ—ʔ

ʔaʔ • n.

stupidity

iRuʔa fit ReTaSa ʔaʔila

‘In the legislature, there’s only stupidity.’

Fractions

Fractions are formed by treating the entire number as if it were a root in the $\Theta a\Theta$ pattern, with the final 'a' in the cardinal number treated as the 'a' in the pattern. This pseudo-root is then put into the $in\Theta i\Theta$ pattern. Some example fractions:

inpis one-half

inbir one-third

inqid one-quarter

inkij one-fifth

insesir one-sixth

inpepis one-seventh

inbebir one-eighth

inqeqid one-ninth

inkekij one-tenth

inkekajsir one-eleventh

inkekajpis one-twelfth

...

injaldamsesarkajpis 1 / 582

...

indedim one-hundredth (10^{-2})

insuusin one-thousandth (10^{-3})

inkekajsuusin one-tenthousandth (10^{-4})

inmiljin one-millionth (10^{-6})

etc.

If one wishes to describe a fraction with something other than one in the numerator, one simply precedes the fractional numeral for the denominator with the cardinal form of the numerator. So, for instance, 355/113 would be said aloud as *pepasdam kaj indedamkekbir*.

Ordinal Numbers

Ordinals are not distinguished from cardinal numbers in any explicit morphological way. In contexts where ordinal numerals would be used in other languages, ʔaʔa-FAM uses either cardinal numerals or other adjectives/adverbs to describe the relationship.
